DETAILED ACTION

The response filed 1/20/04 has been considered in preparing this Office action.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Yamamura (5,319,786).

Yamamura teaches a data storage device (Figs. 1, 2A and 10) comprising a plurality of storing means for storing data (VRAM 7); writing means for writing data to any of said storing means and reading means for reading data from any of said storing means (col. 3, lines 53-64, col. 4, lines 46-51, col. 13, line 59 to col. 14, line 5; col. 16, lines 15-28); addressing means (address unit 21) which, when data are to be either written by said writing means or read by said reading means, addresses said storing means in desired increments by use of a unique address (abstract, col. 4, lines 3-10, col. 6, lines 34-50, and col. 13, line 59 to col. 14, line 5). Yamamura further teaches in accessing a video memory, an address is increased in accordance with a counted value of an address counter by one to write data therein or to read data therefrom (col. 1, lines 47-52). In DMA, on the other hand, a predetermined block length of data is transferred from a source address of the video memory to a destination address thereof

under the control of a DMA controller (col. 1, lines 53-57 and col. 17, lines 8-26).
Therefore, at least claims 1-5 are anticipated by Yamamura.

Response to Arguments

3. Applicant's arguments with respect to claims 1-5 have been considered but are moot in view of the new ground(s) of rejection.
